 ALLSIGNAGE  
SCAN TO ADVERTISE  
allsignage.de

The image shows a tall, black digital signage display mounted on a black post in a modern urban plaza. The display features a dark background with white text and graphics. At the top, it says 'GET READY FOR YOUR PREMIUM ADVERTISEMENT' with a small horizontal line above the first line. Below the text is a white megaphone icon inside a white circle. At the bottom left is a QR code, and at the bottom right is the ALLSIGNAGE logo, the text 'SCAN TO ADVERTISE', and the website 'allsignage.de'. The background shows a modern building with a glass facade, a staircase, and people walking in the plaza.

## What are the benefits of digital signage?

Digital signage offers a flexible and individual way of preparing and providing information using multimedia. The content can be presented statically, animated or as a video. The biggest advantage of digital signage is undoubtedly the ability to distribute the content centrally to all connected devices. This means that customer information, special offers or location-dependent information can be updated on all displays at the touch of a button.

The signage displays are available in many different formats, sizes, materials and colors and thus offer customers and tourists alike a high level of information. At the same time, they orientation and safety both indoors and outdoors. The digital version of classic posters offers a variety of different ways to display content.

In companies, for example, the displays can be used as signposts or information displays for booking meeting rooms.

In shopping centers, supermarkets or restaurants, location-based advertising can also be placed, special offers highlighted or the menu displayed using multimedia. Car parks also benefit from the opportunities to display promotions or special offers.

The ability to customize content quickly and individually ensures that information is provided in a variety of ways and significantly increases visibility thanks to multimedia elements.

## Flexible display options

Whether Smart TV or special signage displays with touch function, large or small, with our digital signage solutions you can always reach your target group in a customized and visually attractive way. In this brochure, we show you everything you can do with our solutions.

# Industrial x64 Tablets

## **AIO IPC Industrial Windows/Linux**

The front of the embedded HMI computer features a black metal frame. An anti-reflective safety glass protective screen or a 10-finger PCAP Multi touch is flush-mounted in this frame. The rear is also made of robust metal. Here you will also find the VESA mount for the swivel arm or the threaded bolts for desk mounting. The inner workings of the Multi touch screen computer consist of high-quality industrial displays with high brightness and contrast values.

The powerful hardware of the industrial tablets offers sufficient interfaces for connecting external devices.

# Telephony and intercom

## **Touch Display DS10**

The ALLNET DS10 is a special display for integration into telephone systems and door stations. The SIP integration makes it possible to integrate the display as a telephone in a PBX, e.g. Fritz Box, 3CX etc. The display can also be configured as a PBX.

Another special feature is the possibility to store so-called Action UR's as buttons. This makes it possible to call the elevator or operate the door opener. In addition, two built-in relays can also be activated to enable further switching operations. The integrated SOS function is especially convenient for older people, as it is possible to store several telephone numbers that can be called simultaneously.

# Software & user interface

## Why did ALLNET develop its own software?

The demand for simple, affordable yet powerful software has increased significantly in recent years. The expansion of the product portfolio around tablets and signage displays has also laid the foundation for individual customer solutions. The ALLSIGNAGE software enables individual preparation and design of static and moving content and at the same time offers all the tools required to distribute the content centrally controlled or according to specific criteria.

## Unique selling points:

- Easy to use thanks to intuitive interface
- Template management and creation of own templates
- Overlay function for displaying information on all existing displays
- Youtube playlist integration
- RTSP camera stream integration
- ALLNET home automation integration
- Monthly subscription and booking of displays
- Android devices and all devices with a browser can be integrated
- Simple customer satisfaction/rating system integrated
- Offline display through own offline app
- Active customer management in your own account
- In-house signage as an internal infotainment solution
- Configuration helper APP for Android phones
- No device constraints
- Whitelabel function

## Whitelabel

We have integrated a special function for our resellers with which the ALLSIGNAGE interface can be adapted to any desired company design. The platform can also be routed to your own desired domain so that you can offer your customers their own signage solutions.

## Offline App

In addition to the Cloud mode, ALLSIGNAGE also offers an option to manually supply devices without an internet connection with content. In this case, the content is loaded onto the device via a USB stick and is then permanently available on the device, even after a restart.

## Signage APP - cross-platform application:

ALLSIGNAGE supports all common software platforms and thus offers a wide range of applications.

WINDOWS

MACOS

ANDROID

LINUX

## Digital advertising platform for resellers and end consumers

Digital advertising platform for resellers and consumers Benefit as an ALLNET customer from the attractive purchasing conditions and sell the service on to your customers. Contact our team to benefit from the ALLSIGNAGE reseller conditions.

## Free software modules

ALLSIGNAGE provides all included modules free of charge. In addition, we regularly add new add-ons and additional modules and thus also integrate customer requests in order to constantly improve functionality.

## A selection of our signage modules:

To integrate multiple images efficiently, the gallery module can be used from the available elements in the “Media” area. This module makes it possible to select and add several images from the media library.

The display duration of the individual images can also be set individually. Images can be removed again in edit mode by simply clicking removed again.

Drag this element into the editing window and the options window will open. Enter the URL of the YouTube video to be displayed here. This element always requires an online connection.

Drag the element into the editing window and select the desired PDF from your media folder. The displayed PDF is scrollable and can therefore also be read via the touchscreen.

The Video Gallery element is used to quickly integrate several videos videos that are to be played one after the other. The videos and the playback sequence can be defined via the selection menu. If desired, the video can also be displayed in full-screen mode.

Drag the MJPG stream element into the editing window and the options window will open. Enter the URL of the desired stream here.

This element always requires an online connection.

## Other modules & features at a glance

### Pictures

Drag the Picture element into the editing area. The editing window opens. Now you can select an image from your media library or directly from a computer.

### Video

You can also integrate your own videos. These can also be added via the editing window.

### Static and self-running playlists

The playlists can be configured statically or dynamically so that customers can actively interact with the content or switch to the next slide themselves.

### Templates - import and export

Numerous ready-made templates are already available, which can be easily imported into your own playlists.

### Slide tracking & verification

With the tracking function, each slide is tracked and recorded in a table. This makes it easy to provide proof and exact billing of the individual playing time. Tracking can be activated directly in the slide overview for each slide.

### Ratings

You can use the rating function to collect feedback from your customers. This allows you to adapt your content to the wishes of your users.

## Discover ALLSIGNAGE now and try it for free

Test two devices free of charge for one month. If you then take out a subscription, you will continue to receive these displays free of charge.
